

Compact solution for the marking of cartons

**AdvancedFeeder
+
Inkjet Printing System
+
Exit conveyor**

Köra-Packmat, the expert for feeding and collating systems manufactures a compact feeding and marking system for flat products.

The friction feeder AF-250 AdvancedFeeder with integrated **3-S-System*** is equipped with a special magazine for cartons that are higher on one side and can thus be stacked and separated systematically.

The cartons are aligned on the feeder's exit conveyor via lateral guiding. The Inkjet Printing System, mounted on this exit conveyor marks the product with single-line information such as article number and expiry date. Other printing applications are possible.

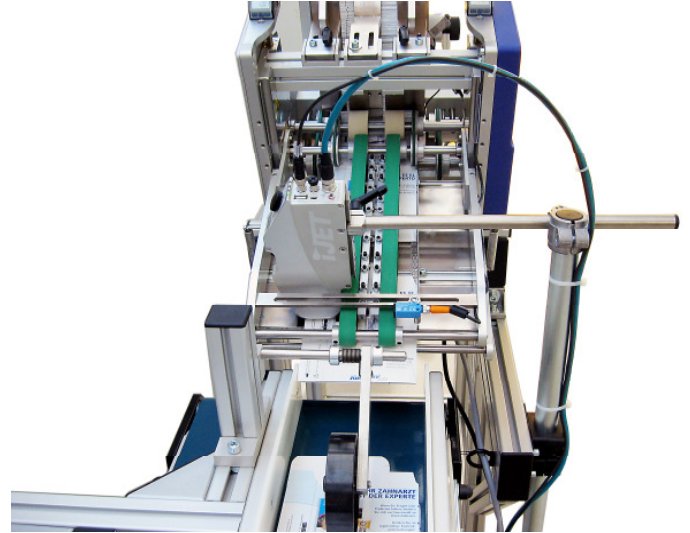

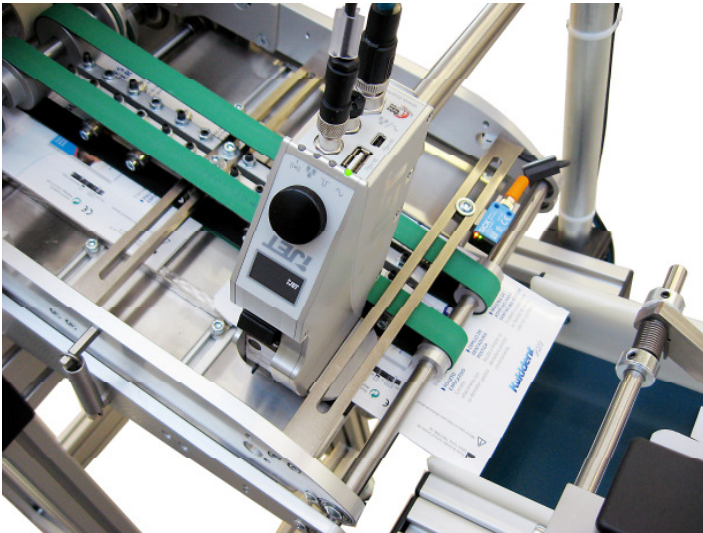

Instead of the Inkjet Printing System, any embossing or labelling system could be integrated.

Afterwards, the products are transferred to the exit conveyor. Upon request, the products can be counted and stacked so that they can be transported directly into a wrapping or further processing machine.

Overview
➤ AF-250 friction feeder
➤ Inkjet Printing system
➤ Max. 120 cycles/Min.
➤ Product size:
Min. 60 x 40 mm
Max. 300 x 300 mm
➤ Others upon request

* exact adjustment of all parameters (air gap, exit extension and magazine) to the requested product thickness via digital display (Patent pending)
